For immediate release

Yonac Software Releases Kauldron for iOS

Yonac delivers the latest virtual-analog modeling technology in their newest synthesizer.

(Durham, NC – November 15, 2017) Yonac Software is pleased to announce the release of Kauldron, now available on the App Store. In addition to its amazing sonic capabilities, Kauldron packs several advanced iOS features including fullscreen AUv3 plugin in Audio Unit compatible iOS DAWs.

"We've been working long and hard to develop Kauldron's completely new virtual-analog technology. The result is our warmest, punchiest synth to date," says chief engineer Jim Yonac. "We augmented this by designing many brand new features, so that big synth sounds come easily. Full of rich, complex analog textures yet deceptively easy to use, Kauldron is a pure, honest synthesizer that requires little help from FX or post-production to take center stage."

Kauldron debuts the next generation of Yonac's Artificial Intelligence preset creation system, SPAWN². Completely reimagining the groundbreaking SPAWN algorithms in the hugely popular Magellan Synth, the new SPAWN² gives unprecedented control over generating presets. In the expert mode, accomplish anything from subtle 'variations on a theme' to bold new sounds. In the basic mode, where Kauldron does all the thinking, get preset after usable preset with just a touch. Kauldron is universal and available in the App Store for a special, limited-time introductory price of $3.99.

Yonac Software was founded in 2008. Located in the Research Triangle of North Carolina, the company focuses on the development of innovative music and sound related software. In 2014, Yonac released ToneStack, an effects/amps processor built on the latest modeling technology and offering the largest selection of guitar units for iOS. Other bestselling Yonac apps include KASPAR, Magellan, Galileo Organ, Steel Guitar, and miniSynth.

KAULDRON SPEC LIST HIGHLIGHTS

- 3 analog modeling oscillators w/ multiple waveforms & true PWM
- New v-Analog filter design w/ 'dirt' overload for even warmer, richer tones
- 2 LFOs with BPM sync, keytracking, trigger mode select & more
- 2 XY-Pads for controlling mod targets or synth parameters
- Arpeggiator with live & program modes, 11 algorithms, gate, swing, note value, octaving & more
- 900+ presets in a wide variety of styles & sound
- SPAWN²: Artificial Intelligence based automatic preset generation
- Universal: works natively on iPad and iPhone
- AUv3 Plugin Included
- Full screen AU mode in compatible DAWs & iOS versions
- Virtual ribbon controller with polyphonic aftertouch, as well as classic keyboard
- Extensive MIDI Learn options
- Powerful preset management system with new features. Save, share & edit presets
- Tapedeck with loop, metronome, preroll, share, audio copy/paste & more
