

For immediate release

Yonac Software Releases MegaSynth, Premier Synthesizer for iPhone and iPod Touch

From the creators of miniSynth comes its long-awaited “big brother.” MegaSynth brings together several innovative features to make it the definitive synthesizer for iPhone and iPod Touch.

(New York, NY – April 18, 2008) Yonac Software is pleased to announce the release of MegaSynth. Following the success of the company’s analog-modeling miniSynth, the developers have worked hard to create a synth that utilizes the capabilities of the iPhone to the utmost. It combines several features to offer one of the most creative and powerful synthesizers available for the iPhone and iPod Touch. MegaSynth utilizes several features to empower the musician including:

- 5-voice polyphony
- 3 oscillators with 7 waveforms each
- Configurable triad arpeggiator and chordmaker with 23 musical scales
- 24-note step sequencer
- Accelerometer-controlled pitch, cutoff and resonance
- 4 LFOs
- Noise generator
- Oscillator syncing
- Recording; audio file import/export via Wi-Fi connection
- Infinite user presets
- 209 factory sounds
- Reverb and modulation effects

“We’ve worked hard for many months to produce a synth that caters to sonic exploration,” says CEO and MegaSynth head designer James Yonac. “MegaSynth’s features will have synth lovers drooling, yet those new to synthesizers will find the intuitive interface easy to navigate. It is sure to inspire many new musical compositions.” MegaSynth is now available at the Apple iTunes app store for \$4.99.

Yonac Software was founded in New York City in 2008. The company mainly focuses on the development of music and sound related software. In September 2008, they released the hugely successful miniSynth, the app store’s first synthesizer. Yonac’s other iPhone applications include TuneORama, an easy-to-use guitar tuner, and Thereminator, a touch screen theremin.
